Technical Inspection of Fuel Tankers (6 months)

* Purpose of the Technical Inspection:

- The purpose of the periodic technical inspection of fuel tanks, accessories, vaporizers, unloading and loading devices is to meet the requirements of the Saudi Standards and Metrology Organization (SASO), specification No. 2288, clause 10.7.3 in order to ensure the safety of the tank and anticipate any danger or damage expected in the tank and make the necessary repairs before it occurs.
- Maintain the integrity of the tank and truck by inspecting and detecting any defects that may affect the operating efficiency and functionality for at least 6 months in service, which helps to ensure its functionality without the expectation of damage due to technical defects.
- Report all observed issues to the carrier and to Aramco, and provide the results of the tanker inspection and recommendations to be taken if the tanker or trailer is not fit to stay in service.

Technical Inspection of Fuel Tankers (6 months)

* Inspection Steps and Procedures:

1. Reviewing the documents of the tanker and truck and ensure that they comply with the legal requirements set forth in the Kingdom.
2. Reviewing the previous inspection report to ensure that all recommendations and observations have been taken into consideration.
3. Reviewing the periodic inspection report of the truck to ensure that the truck passes the inspection and that the report is valid.

Technical Inspection of Fuel Tankers (6 months)

*** Inspection Steps and Procedures:**

1. Checking in the truck and issuing the entry card to the technical team so that they can commence the inspection.
2. The technical team will verify the compliance of the truck and tank specifications and the axle weight in accordance with the truck registration document (Mizan card) and the actual condition of the vehicle.
3. The technical team will conduct a visual inspection of the tank and the vehicle as a whole.
4. Conducting a visual inspection of the axles to ascertain that they are free from damage, cracks or any other form of deformation to the axle body or weight.

Checking the weight of the axles and informing the maintenance team if there are any abnormalities that need to be corrected. In the event of any correction or maintenance of the axles, the weight of the axles will be rechecked after completion of the maintenance.

Technical Inspection of Fuel Tankers (6 months)

* Inspection Procedures:

Measuring the position of the axles by means of an alignment measurement system designed for heavy trucks.
The LASER AM Truck Device is used for this purpose.

Technical Inspection of Fuel Tankers (6 months)

* Inspection Procedures:

1. The technicians conduct a thorough examination of the tires and rims to ascertain that the tires on the truck and tanker are in optimal condition, free from any sharp cracks, missing bolts or nuts, and exhibiting no bulges. Additionally, they verify that the minimum tread depth is 2/32 inch (2 mm), the rims are in good condition, with no scratches and no dents, and that the tire shanks do not extend beyond the rim edge.
2. It is imperative that all wheel angles are verified using a Truck Alignment Measurement System (LASER AM Truck Device).

Technical Inspection of Fuel Tankers (6 months)

* Inspection Procedures:

1. The technician team visually inspects the condition of the brakes to ensure that there are no leaks or damage to the brake rods.
2. The technician team checks for air leaks by running the truck for 10 minutes and then switching off and listening carefully for any leakage sound. Alternatively, they may use soapy water to check for minor leaks.
3. The technician team checks the air and brake system of the tank and truck by checking the functions (activation of the air interlock valve via a lower switch and emergency closure of the valve). To check if the truck's brakes are working, the technician team attempts to drive away with the air interlock in the activated position.
